

## Schools go for Campus Smart Card Application

### OVERVIEW

West Island School is an international secondary school in Hong Kong and is one of the schools established by the English Schools Foundation. It offers secondary education from year 7 to 13 for children aged 11-18 based on the British National Curriculum and also International Baccalaureate Qualification.

### THE CHALLENGE

Most schools today have taken initiatives to computerize the administration and to modernize the facilities by leveraging on information technology to keep pace with the development in quality education.

Campus smart card is such a solution that can benefit a school substantially. Being able to combine multiple applications onto one smart card opens new horizon. But it requires an integrated card processing system to link various modules into a seamless platform.

### THE SOLUTION

Building up a truly integrated campus smart card platform that supports "one card for multi-applications" for school being a closed community.

The smart card is not only a new generation student pass but also a key to access various types of campus services including copying, printing, access control and payment at tuck shops.

MajorLink products & services include the student smart card, card issuance system, copier reader, print control terminal, card reader and POS integration support.

Launched in Q3-2002 for phase 1 installation and Q3-2003 for phase 2 deployment.
